**INVITATION**

Environment is one of the main concerns in the world. The protection of environment is a phenomenon related with the development level of societies. Although leather industry is known as being a polluting sector, it can be converted to a more environmental friendly state by amendment of current technology, development and uses of new technologies for leather processes and treatment systems, minimizing and utilizing of wastes by establishing a better waste management system.

In this symposium, new developments in leather processes, environmental issues and innovations on treatment systems in leather industry will be presented comprehensively. Furthermore, scientific and technical issues will be discussed by means of sectoral approaches and the image of the sector and its relations with environment and public health will be debated and it will be instructed about the applications of the developments in this field.

Also in this symposium it has been aimed to share the information by transmitting the results of the researches made in universities, research institutes and other scientific institutions, the information and experience obtained by the research and applications in the industry. Another purpose of the symposium is to create a synergy after the presentations and discussions, which may help to increase the environmental consciousness of the leather sector and to improve the industrial applications by present science/knowledge and technology. We invite everybody who is interested in the stated issues to participate the symposium including oral and poster presentations, invited speakers, workshops and company exhibitions.
